

Forming a family team

Discuss the **project** together, discuss the challenge and follow your project guide to see the plan for a **solution**.

Each family member should say what they'd like to do. Everyone can try something new & challenging. An adult or a child can do any job, and you can also **swap jobs** after a time.

The **team** look out for each other and help to work on the challenge and produce a solution. Each takes responsibility for their own job, but also talks with the others to make sure the work goes smoothly. Sometimes, two can share a job.

In a team, different people are responsible for different jobs

Write in the names of the people who'll do each job:

Project Manager A **project manager** sees that everyone is involved, writes down an **agreed plan** of what to do in what order, checks that the plan is working, changes the plan as needed and makes sure that you all start and stop at the right time.

.....

Designer The task for a **designer** is to draw & note down the team's agreement on what the problem is and on how the solution should look and work.

.....

Coder A **coder** operates the computer to place blocks together to make the sequence of steps that make it work.

.....

Maker A **maker** cuts materials, fixes together and decorates.

.....

Reviewer A **reviewer** checks that the design is good by asking:

1. Does it look right?
2. Is it working?
3. Are there steps missing?

.....
